Project Design Phase-I Team ID: PNT2022TMID38983 Prepare Solution Fit

1.customer segment:	5.customer:	8.Available solution:
The primary clients for our task are: i) Farmers who need to Work on the yield of their harvests. ii) Ranchers who need to know the state of their harvests and it Natural circumstances so they can take the fundamental techniques right away.	Network availability would be the principal limitation as we use Wi- Fi which has major impediments like in inclusion, versatility and power utilization.	gigantic detriment of brilliant cultivating is that it requires a limitless or consistent web association to find success. This means that in rustic networks, particularly in the agricultural nations where we have mass crop creation, it is totally difficult to work this
		cultivating strategy.

2.Jobs to be done/Problem:	6.Problem root cause:	9.Behaviour:
)The farmers will initially find it hard to use the device as they have to get familiar with the technologies. ii)They must be with their phone/laptop always so that they would be alarmed when they get the message/mail.	farmers are not able to achieve their goals(i.e.) receiving the expected profit due to various reasons like the presence of excess	regarding the location, well- being, and health of their crops. Weather stations equipped with smart sensors can collect weather data and send useful

3.TRIGGER:	7.Your solution:	10.channels of behavior:
Customers get triggered mainly because to save their crops and to prevent them from the damage as they feel depressed when they face the losses and it indirectly affects their family	To provide an alternate (i.e) to avoid the network problems we are also going to introduce the manual mode where the	Offline: The IoT-based smart farming not only helps in modernizing the conventional farming methods but also targets other agriculture methods like

too. farmers organic farming, can stop the water flow family farming 4.Emotions:Before/Afte (complex or small /provide spaces, particular limited amount of water flow into the field., Make it cattle and/or cultures, r: more user preservation of particular friendly(like appoint the or high-quality varieties, : Before: help center team to guide etc.), and Depressed ,loss of time ,Facing more losses them whenever they are enhances highly facing any trouble with our transparent farming. After: Confident Gets chance Online: IoT-based smart to spend time efficiently. арр farming is also beneficial in terms of environmental issues. It can help the farmers to use water efficiently
